[Garden RailRoad \(G Scale\) You Control](#)

Tacky Teddy - Wacky World, is just what you see, for now!
 Train is in the middle area, 15 x 20 that runs down hill to the SouthEast at a 13% grade. On the South tip (10 x8) is an small apple tree, pine tree and flowering shrubs. A garden area (16x16) is to the north (and if the garden moves, it would make a nice area for a little town). In the middle, the train area, I'm thinking of starting out on the N.W of this area and building up from that point. This would keep and even grade with the now garden area, if and when the town gets added in future. For now in the train area, I just might make a fig 8 with a mountian in the center.
